

Confidential Report

The Shocking Truth: **What Most Doctors & Drug Companies Probably DON'T Want You To Know About Fibromyalgia!**

“In This Special Health Report You’ll Discover Little-Known Secrets That May Finally Rescue You From the Ongoing Misery Of Fibromyalgia!”

You Will Learn...

- *Why Fibromyalgia Syndrome is so frequently diagnosed*
- *Why Pain Medication May Make Things Worse!*
- *Why Exercising May Cause More Pain!*
- *How Nutritional, Hormonal, And Environmental Factors May Play A Role!*
- *Why Most Medical Doctors, Rheumatologists, And Chiropractors Fail To Provide Any Long-Lasting Relief From The Pain And Fatigue!*
- *How to Find Safe, Drug-Free Help...It’s Easier Than You Think.*
- *Why Most Doctors Just Prescribe Drugs and Tell You to Exercise*

How a Local Doctor Is Silently Rescuing “Fibromyalgia/Chronic Fatigue Syndrome” Sufferers From Pain, Misery and a Life-long Dependency on Drugs!

Dear Friend in Pain:

Would you like to return to pain-free living without having to resort to harmful drugs or surgery? Are you afraid that a steady diet of drugs is your only option and feel skeptical about anything else that claims to work?

If you answered “yes,” then you must read this entire report because it was written for you, the skeptical fibromyalgia sufferer.

Many people are forced to quit their jobs because of fibromyalgia and sadly, business owners have LOST their business because of this LIFE-CHANGING condition. And here’s what I believe to be the reason — my patients tell me that:

Most Doctors Do Not Have a Thorough Understanding of Fibromyalgia!

You have probably already been to several doctors and tried many different drugs or therapies. But think about this: Most medical doctors spend their day treating infections, cuts, fractures, prescribing medications, or performing surgery. They simply do not have the experience or knowledge in successfully treating fibromyalgia – it’s just not a big part of their training.

So then, once a doctor *finally* diagnosed you with fibromyalgia, you were probably given some drug prescriptions and maybe some exercises or the number of a support group. And then you were probably referred to either a physical therapist or a rheumatologist. You might have even tried some natural approaches that have failed, such as going to a chiropractor or two, or perhaps seeing a massage therapist. Well let me ask you this:

What if your Fibromyalgia Pain & Fatigue Could Be Helped Right Now?

Read this report very carefully. A tremendous amount of work went into it, and I guarantee you won’t get this information anywhere else. It may be the key between you continuing to suffer, or living a normal life again.

“My doctor said that I would just have to live with the pain. I refused to accept this until the rheumatologist he sent me to told me exactly the same thing.” This is one of the most common complaints I have heard from patients I’ve interviewed with fibromyalgia.

Maybe you too, have lived for months, or even years with your pain. In fact, you may have reached a point where you have accepted everyone's opinions that you will just have to live with it. If you are like most fibromyalgia sufferers, you have been to numerous "specialists," wasted valuable time, and money to no avail!

Hi! My name is Dr. Craig E Gibson, D.C. and I have been successfully treating patients diagnosed with fibromyalgia syndrome. I decided to write this report after helping so many of my patients with this chronic, almost hopeless condition. To be honest, when I first began helping people with fibromyalgia a few years ago, I did not have much success. But after years of consulting with other doctors around the country who were successful with fibromyalgia, and trying many different methods on my patients with fibromyalgia, I have discovered little-known methods to help achieve long-lasting relief from the pain and fatigue of fibromyalgia and similar conditions.

Many fibromyalgia patients experience musculoskeletal pain and aching, disturbed sleeping patterns, fatigue, depression, numbness and tingling in the arms and/or legs, migraine headaches, TMJ problems, and bowel and bladder disturbances. Millions of people have been diagnosed with this "mysterious" condition...and the numbers seem to be on the rise. It seems to me these days that anybody who's got a variety of aches and pains, but medical tests show "*nothing is wrong*" is diagnosed with Fibromyalgia!!

Many patients say that their symptoms began gradually and eventually "snowballed" into more and more problems. They felt as though they were stuck in a *vicious cycle* of pain, fatigue, emotional stress and drugs.

Sound familiar?

“With each and every doctor I went to, all he would do is give me some new drug. I was given sleeping pills, anti-depressants and painkillers – the worst part is that none of them worked very well!!”

Don't get me wrong...I understand that you'd be in really, really bad shape if you didn't have medications to keep you going...I'm not against their use. And I respect that the doctors are trying to help. But think about this: What is it that drugs *really* do?

You probably realize that these drugs given to you don't treat the cause of the problem.

Right?

Here's what they do: They're designed to make you feel a little better...that is, until they wear off. Plus, your body may instinctively adapt to these drugs and you might find yourself gradually needing to increase your dosages . . . indefinitely. Of course, there is always the possibility that the drug will stop working for you – or may not even be effective in the first place. So then...

Why Can't Doctors Seem to Find Anything That Significantly Helps Fibromyalgia Sufferers? Why Does the Pain Continue?

The answer may lie in the fact that *fibromyalgia is a mystery to most medical researchers*. Most of their studies have yet to *pinpoint* the apparent cause of fibromyalgia. There is not even one medical test, which objectively diagnoses it, so it is more like a "*process of elimination*."

Could it be that fibromyalgia Syndrome is a diagnosis given by doctors to people with a lot of pain that they don't know what the problem actually is? In most cases, I emphatically say YES!

“Speaking of diagnosis, it sure would be easier if physicians would not use fibromyalgia as a way of saying, I am too busy to look further into your problem and throw out Fibromyalgia like an old piece of paper into the trash.”

-Dr. David T. Ryan, USA Fibromyalgia Association, 1996

Furthermore, there is not a single patient with fibromyalgia that has identical symptoms...everyone is different!

“Fibromyalgia is a multi-factorial syndrome and NO treatment guidelines apply to all cases.”

-American Family Physician, April 1996

Why is the treatment always the same?

“Traditional” medical doctors seem to be taught only ONE way to treat your conditions:

DRUGS, DRUGS and More DRUGS!

Excuse me for being blunt, but I think this is “stone age” technology health care!!

Giving you drugs for nearly everything is totally outdated, potentially dangerous, and it’s trapping millions of people in pain for years – totally unnecessarily!

Really scary, isn’t it?

Now please, don’t get me wrong. I think that “traditionally” trained doctors are some of the hardest working, most educated professionals on the planet. I’m a doctor too, and I know that most doctors aren’t doing this to you on purpose. But prescribing drugs and doing surgery are basically the ONLY things they’ve been taught to do...The concept of treating your pains with drugs is really the only way they have been trained to think!

Think about it – how often has a doctor offered you a non-drug or non-surgical solution? Did you ever ask a doctor how their drugs could possibly fix the cause of the problem? Did you ever ask if anything else could be done? What would they say?

Prescription drugs are designed to offer temporary relief. Unfortunately, the risks can outweigh the benefits! Sure, drugs will make you feel better for a while. **Drugs are a short-term solution. Remember that they treat only the symptoms. They rarely, if EVER target your problem’s causes, nor do they promote better health.**

Think about what the *purpose of PAIN actually is?* – Pain warns you that **SOMETHING IS BIG-TIME WRONG!** It’s your body’s “alarm system.” Treating pain only with drugs is like pulling the battery out of a smoke alarm during a fire – you’re ignoring the cause of the problem! All these pills do is temporarily turn off the “fire alarm,” the pain which tells you there’s a problem. Sure, the drugs may ease the pain, but the “fire continues to burn” That’s only a temporary fix.

Can you see that?

So what does this all mean for you?

It’s simple

It means that the likelihood of you being offered a drug-free solution to your ailments is “slim-to-none!! Again, I’m not against the use of drugs for fibromyalgia. Some people need various treatment methods to address different aspects of their condition. Drugs often save lives too.

I DO however, OBJECT to the use of drugs as the *first and only* line of defense, before checking to find the CAUSES of the problems and see if there are natural ways to safely correct the problems. Drugs are NOT “modern” technology in my book!

Now I Hate To Sound Like A Nagging Parent, But You Have 3 Choices...

- A. Continue prescription medication and self-medicating and living with the terrible pain caused by fibromyalgia, FOREVER! (This is like putting duct tape over the warning light in your car if the oil is low!)
- B. Admit that your fibromyalgia pain is ruining your life and do something other than temporarily covering your pain with drugs; which, by the way, may be damaging your kidneys, liver and stomach.
- C. Try to fix or improve the causative factors of your chronic pain. If this interests you, please read the rest of this report.

Don't you owe it to your family and yourself?

Don't give up hope! If you are sick and tired of being sick and tired and you're not ready to accept the restricted lifestyle that so-called “experts” have told you to accept, then you may have to change your approach.

The first step in beating the odds is to do something different from what you've been already doing.

Fibromyalgia: A NEW UNDERSTANDING:

There are lots of different opinions about fibromyalgia from doctors and researchers. Although the exact mechanism of Fibromyalgia is not fully understood, research indicates that many patients may have a **Central Nervous System malfunction as well as nutritional deficiencies that need to be addressed. We will cover the Nervous System first:**

Decreased function of the Nervous System was found in Fibromyalgia Syndrome and Chronic Fatigue Syndrome

At this point you may be thinking, “what could cause malfunction of my nervous system, and if my nervous system is messed up, then why didn't any of the other doctors tell me? First of all, the other doctors were probably too busy doing x-rays, MRIs, and blood work to worry about the effects of the nervous system. Second, the nervous system isn't affected in the same way as in other conditions such as multiple sclerosis, ALS, etc. As a result there are no positive tests they do to confirm involvement of the central nervous system in fibromyalgia. Nerve conduction studies are almost always negative.

To answer the next question, which is “what could cause malfunction of the nervous system”, unfortunately there is no simple answer. However, you must realize that the physical stress we put on our bodies throughout our

lives is pretty significant, and it's usually a **combination of factors** that eventually cause the central nervous system to break down. Examples are poor posture, stress, poor eating habits, activities that require excessive sitting or standing, as well as heavy lifting, bending, and repetitive movements. Plus there probably are hereditary factors as well, which is why it's not uncommon for someone with fibromyalgia who has a mother, sister, or daughter that also has fibromyalgia or similar problems.

If nerve pathways are irritated, the nerve impulses become abnormal – like wires becoming “short-circuited.” **These abnormal impulses can cause muscles to be unbalanced, weak, tender and painful.** This nerve interference and body imbalance can cause a wide variety of symptoms found frequently with fibromyalgia.

But understand that this imbalance may not *instantly* cause pain or sickness. In fact, it can take many, many YEARS before symptoms appear. Nerves, muscles and bones break down slowly – you can't feel it until its BAD ENOUGH. And if you ignore it, it has devastating effects on your overall health, and can cause tremendous pain and suffering.

“How could you expect to be healthy and pain-free without proper nerve signals and body balance?”

That's Easy. . . You Can't!!

You see, your brain and body need normal nerve and blood supply just as a plant needs water. The more often the blood and nerve supply is “choked off”, the more problems you will have.

Your muscles need a normal nerve supply and balance, just as a plant needs water. The more that the vital nerve supply is “choked off” from the muscles, the more problems the muscle will have. How can a muscle function normally if its power supply is not normal? The muscles and other tissues will function abnormally if their nerve supply is “short circuited.”

“Can't I just do exercises to fix up my muscles?”

You may have been told to go and strengthen your muscles. Studies don't support this in cases of fibromyalgia. Your muscles are likely malfunctioning due to improper nerve supply and skeletal imbalance, as well as having nutritional deficiencies

I ask you this...***Have exercises helped your fibromyalgia before?*** In fact, most say exercises “prescribed” by a doctor or physical therapist made their pain WORSE!

Maybe you now understand why.

Ask yourself a question...since your muscles aren't functioning normally, would you want to add their workload by trying to strengthen them with a rigid exercise routine in its present state? Would it make sense to take a car that was out of balance and keep driving it? Would you take any machine or household appliance that was broken and out of balance and use it *MORE*? You'd just be contributing to further wear and tear... right?

Haven't YOU Had Enough Wear and Tear Already?

There's a time and a place for exercise. It's when the body's in better BALANCE. Further damage may occur from hammering muscles through exercise, when they don't have proper balance and nerve supply.

Why put yourself through that? If a plant were dying from a lack of water, all the sunshine, air or fertilizer in the world could not make it well again. It needs the stuff that's missing.

“What About Nutritional Supplements? Can They Help Me”?

Sure they can. Many Fibromyalgia sufferers have certain nutritional deficiencies that should be addressed. Understand that while supplements are important, they are likely only part of the solution. You must also realize that **many supplements found on the shelves of the local drug store are worthless!** They frequently are of low quality, which is why they are so cheap, and as a result they don't absorb well and perform as they should. Even some of the popular health food stores have supplements that aren't of the highest quality. And if you can get a hold of high quality supplements, you must be aware of the correct quantity to take....and of course what to take. Most people who purchase supplements load up on Calcium, Magnesium, Glucosamine, etc. This is probably not what you need. And how do you know whether to take 50 mg, 100 mg, 1000 mg, or somewhere in between? Taking an incorrect dose may or may not harm you, but it probably won't help you much either. And while it is important to address any nutritional deficiencies, supplements can never correct the neurological and skeletal imbalance (just like drugs can't straighten them out).

Here's Why Most Fibromyalgia Pain Never Goes Away...

1. Drugs Don't Fix the Cause of Most Pain. They Only Temporarily Hide it!
2. Many patients are “written off” as being hopeless (*could it be because they are Misdiagnosed and Mistreated?*).
3. Most Exercise programs are worthless; IF your body is out of balance – it can make things worse! (Try continuing to drive a car with a bent framework!) I'm all for exercise, when appropriately done.
4. While nutritional treatments do help some people, most people don't know what to take, plus supplements don't correct structural/neurological imbalance.
5. Traditional Chiropractic techniques that involve twisting of the spinal bones and joints often irritate the nerves and muscles of sensitive fibromyalgia sufferers, which often makes your condition worse! As you'll soon learn, our treatment methods are not only gentle, but are extremely different from other healthcare professionals.
6. You're overworked, stressed out, and you don't see your life or job changing soon, so you've decided to just “live with it.” This is why a lot of people have some of their health problems. Their lifestyle stinks and they are not taking care of themselves. But still, there must be an underlying physical problem at the core. Stress doesn't actually CAUSE anything. It can trigger many problems that are buried beneath the surface.
7. Your doctors haven't investigated some effective, safe treatment measures, which *are* available to you.

But think about it, when you went to your doctor, how thorough was your evaluation? What exactly did the doctor examine? Did he or she just ask you a series of questions, press on some sore spots, and then tell you something like; “it sounds to me like you have fibromyalgia”

Or did the doctor test for all kinds of other things (that came up negative) and then come to the conclusion it was fibromyalgia, because nothing else showed up on the x-rays, MRI's, CAT scans and blood tests? Does that sound like a thorough examination, accurate diagnosis or quality care to you?”

If You Have Central Nervous System Malfunction and any Nutritional, Hormonal, or Environmental Factors Associated With Fibromyalgia, You May Be Days Away From Beginning to Feel Your New Self Again!

If you have been to a chiropractor or another natural healthcare professional for your fibromyalgia previously, please keep an open mind as you continue reading. What if I told you there was now a NON-SURGICAL, NON-DRUG procedure that could naturally reduce the stress of the nervous system – painlessly, safely and at microscopic cost compared to other ineffective treatment procedures -- an option that may reduce or eliminate much of your pain? You *would* be interested, right? You'd certainly want to know all about it, wouldn't you? Well, it's available now in a few select clinics.

Many fibromyalgia patients are very sensitive to even the lightest touch. Typical chiropractic techniques involve “twisting and popping” of the spinal bones and joints to try to affect the spine. The typical fibromyalgia patient already has muscles that are tender and joints that may be irritated, and this aggressive manipulation usually causes more harm than good. In addition, most nutritional programs don't work because they are not tailored to the individual. To address the nervous system component of fibromyalgia (we'll get to the other components shortly), our specific procedure in addition to the “cold laser” is a high tech way to safely and gently treat fibromyalgia.

The cold laser is a special “high-tech” instrument uses light energy to painlessly treat muscle spasm and ligament tension. Most people are amazed at how simple the procedure is, and most importantly, how effective.

Understand that every medication prescribed is merely an attempt to treat the symptoms of fibromyalgia. With our procedures, we are very concerned with correcting one of the causes – Joint Resistance and decreased tissue compliance, which causes nervous system malfunction.

The specific treatment skillfully reduces the muscle tension and joint resistance of the spine. This takes the pressure off of the nerves, blood vessels and other structures. Everyday, this very safe and gentle, non-surgical procedure is dramatically reducing the pain and suffering for fibromyalgia and many other chronic pain conditions.

Now of course there are other factors we must consider besides treating the spine, which is another reason why most chiropractors are unsuccessful in treating fibromyalgia. No two people are alike and there can be multiple causes of Fibromyalgia pain. It is by no means a “cure-all,” however it has truly been the answer to restoring a normal life for Fibromyalgia Syndrome patients around the country.

By the way, do yourself a favor:

If you are looking for help, but already have reservations about the Procedure, because it's done by a Doctor of *Chiropractic*, please have an open mind...for your sake. Just forget anything you know, have experienced, or have heard about with any form of treatment until you have thoroughly investigated the procedure.

Medical doctors have all kinds of specialties and procedures -- some are great for certain things... and some for others! And some just plain don't work well at all. The same holds true for Chiropractic doctors and their procedures. If you check out the facts you'll discover a whole lot is out there to help people, each doctor and method having various benefits for certain individuals and conditions.

There are many wonderful techniques available for various problems done by both traditional medical and chiropractic doctors. I am not going to tell you that the “This procedure is the “best way” the “right way” or the “only way” to help Fibromyalgia...It's just MY way. And I hope I can help you too.

Current research points to the central nervous system being a primary link to effectively treating fibromyalgia. Would you put your case in the hands of a medical doctor who treats a little bit of everything? Or would you rather see a doctor who successfully treats patients diagnosed with fibromyalgia syndrome?

Don't you think it matters? My best advice is to ask any doctor you're considering consulting for Fibromyalgia the following questions:

1. **Can you prove to me that you have helped people with fibromyalgia?** Many doctors will tell you that they can help you with fibromyalgia, but will offer no proof. Although due to patient confidentiality, no doctor can provide you with the names of any patients, at our office we have a patient testimonial book that has the actual names and pictures of people we have helped with many chronic conditions, including fibromyalgia, along with their stories on how we have helped them out. You are always welcome to come to our office to check it out.
2. **How do you address any nutritional problems?** Make sure whoever you go to doesn't just recommend going to the store to pick up some calcium, MSM, and Glucosamine Sulfate. While many fibromyalgia patients have similar nutritional deficiencies, there can be variations from person to person. We actually use a special liquid vitamin/mineral compound that is not available at any store.
3. **Would you periodically examine me even after my fibromyalgia has improved to minimize the amount of future flare-ups?** There's a saying, the best doctors are those who prevent what they treat. So if the doctor *only* treats people in pain, don't choose that one. These doctors may be more money motivated than results motivated. Since fibromyalgia has no permanent cure, the patients who regularly maintain their health do a lot better. So only choose a doctor who will help you maintain your health. After all, would you go back to a dentist who fixes a cavity and tells you to "come see me next time your teeth are hurting"? No, you would want to go to one who shows you how to maintain your teeth in a healthy state and recommend regular cleanings for prevention.
4. **Do you process insurance and provide no-interest payment plans?** Nowadays, many doctors are getting out of managed care (HMO's) because they are forced to cut patients off from care even if they need more care or more tests. Although we do file and process insurance in our office, please understand that most insurance companies are designed for pain relief and not corrective care. Patients are either going with the "managed care doctor" on their list and hoping and praying that they'll get quality care, or paying out of pocket for their services. So, in response, there are many caring dentists, medical doctors, chiropractors, podiatrists and others who are giving patients comfortable payment options.

These questions should provide you enough information to make the right choice.

Anyway, in closing...

The number of patients that I am proud to tell you I have helped, with chronic and "hopeless" conditions has been astounding, to say the least. Many of them say that if they had had this information in their hands 10 years ago, they would have saved years of pain and suffering, plus a ton of time and money, not to mention the heartache of feeling helpless. It is at the urging of these patients that I feel compelled to share the knowledge I have gained over the years. But please consider this...

Knowledge without action is worthless!

That's why I wrote this report. I just couldn't stand it anymore! People are suffering with Fibromyalgia/Chronic Fatigue Syndrome, whom I might be able to help. Maybe you are one of them. I had to find a way to educate people about the most powerful, yet misunderstood health technology today. Plus of course, other components of our care such as nutritional, environmental, and hormonal factors.

The first step to breaking the cycle of pain is to do something different today from what you did yesterday!

If you'll pay attention to what I'm saying, YOU MAY NEVER HAVE TO SUFFER THE SAME WAY AGAIN! This is the one 'secret' that not one in ten thousand people understand. Now you know it. But this is THE secret that your family physician, rheumatologist, neurologist, orthopedist or psychiatrist is unlikely to ever tell you (just try asking him/her about it – see if the doctor is knowledgeable or open-minded).

The Adjusting Procedure and Cold laser are NON-Surgical, gentle, and SAFE & NATURAL. Along with proper advice on nutrition and specific stretching exercises, this procedure is rescuing fibromyalgia sufferers from a "life sentence" of daily misery, pain and drugs.

Our natural methods are putting fibromyalgia patients on the road to a happier, healthier and more productive life – with much less pain, better sleep and increased energy — using only scientific, clinically researched procedures.

Whew! You have learned a lot here, haven't you? I hope you've learned a lot about how you may reduce or eliminate fibromyalgia pain and fatigue.

I perform a limited number of \$29 Fibromyalgia Evaluations for qualified patients at my Natural Pain Relief And Wellness Center. I will determine if I think that I can help. If I can't, I will try to refer you out to someone who can. If I can, then it will be completely up to you whether you want me to help you. There will be no pressure from either myself or my staff.

I'm committed to reducing your pain in the shortest amount of time possible – without drugs or surgery.

Anyway, if you'd like to learn more and find out if you are a candidate for our gentle and natural procedures, just give my office a call and my staff will set you up for a \$29 Consultation and Fibromyalgia evaluation (\$179 value).

Your Fibromyalgia Evaluation Will Include...

- 1. Case Overview** - I will ask you specific questions that will help discover causative factors of your fibromyalgia. This is also an opportunity for me to have a thorough understanding of your condition and what you've been going through.
- 2. Full Spine Evaluation** – I want to know if there is anything out of alignment in your spine associated with irritation of the spinal nerves and this helps us discover where your problem is.

If I determine through these introductory services that you have Nervous System Malfunction contributing to your fibromyalgia, and I think you're a good candidate for this technique/Cold laser combination Procedure, I will make the appropriate recommendations for additional testing or treatment at that time. It will be up to you to tell me what you wish to do...**No surprises, No nonsense!!** Since my practice is very busy, I provide these evaluations by appointment only.

I assure you that there will be NO PRESSURE or obligation of any kind. That's a PROMISE! If you're interested – great! I hope I can help. If not, that's okay too. I am extremely busy helping patients with chronic pain every day. I'm not interested in wasting my time or yours trying to convince you or anyone else to let me help. I'm only interested in people who want my help, and ask me for it.

No “strings attached.”

Of course, I understand that you might be skeptical about all of this. It's human nature. People often look for any reason or excuse they can come up with NOT to investigate something different.

So why do I do this? It's very simple ...

Our natural methods have been helping fibromyalgia sufferers for a quite some time now, yet many people have been through so many doctors that they're skeptical about trying something different. So, I understand that you may be hesitant to have an evaluation. You're skeptical and you don't know if this is “for real” but you'd like to check it out, without any costs or obligations.

You see, I understand that you've been disappointed by doctors in the past, and I've accepted the fact that in order for me to help more fibromyalgia sufferers, I must leave you NO excuses to avoid taking a look. There is no good reason why anyone should not at least investigate this phenomenal procedure. Too many people are suffering because they didn't weigh all their options and their doctors were not well informed.

You have nothing to lose . . . except your pain and fatigue!

I've written this report for YOU because without it, you may never have found out about the very thing that might possibly give you your *life* back. The health benefits of our safe and natural procedures are far-reaching.

But I will say this: There are only 3 good reasons why you should NOT explore our care:

- 1: You're looking for some “magic potion” or instant “cure.”
- 2: You've given up on trying to get better, no matter what anyone says.
- 3: You're NOT willing to explore something other than DRUGS and SURGERY

Anyway, if you have questions or you'd like to schedule an appointment for a **\$29 Fibromyalgia evaluation**, call my office at (828) 452-3330. My staff will be happy to help you, and if you have a question for me, I will gladly speak to you. If I am helping a patient when you call, I will call you back.

Who knows? You might just like what you see so much, and you'll never return to the days of daily fibromyalgia pain and fatigue again! Whatever you decide, I wish you a prosperous . . .happy. . .and **pain-free life!**

Yours for better health,

Dr. Craig E Gibson, D.C.

P.S. One last thing – It's Really Important – Please remember... I cannot possibly accept everyone on my program. I could easily get swamped very quickly. If that happens, I will have to stop the offer and start a waiting list. I did not write this report to get rich. I have a very busy practice already. No. I wrote this report because I honestly want to make a difference for so many fibromyalgia sufferers in the world. And I'm always amazed at how quickly and easily someone's life can **completely turn around**. Now with this report, I get the message out to many more people. It's exciting.

So don't delay of this. If you want to find out if you qualify for this amazing program...call right now.

**“This Specialized Analysis Was Quick, Gentle, & Easy...
I Am Glad I Had The Test Done:
It Helped Locate The Problem Areas And Was Completely Painless!”**

Our Patients Speak:

“I have been a nurse for 36 years and very active. I had a situation where I got hurt and did not have the opportunity to heal properly. As time went on I develop more and more pain that literally wore me down. I got to a point where I was in constant daily pain and desperate. A vicious cycle. Lyrica, Gabapentin side effects were horrible. A doctor told me about this new treatment they said I would know right away whether this would help me. I was skeptical because I had tried everything with no help. If you hear something that is amazing and sounds too good to be true I didnt want to be disappointed, so my expectations were low. With the trial treatment in the doctor's office within eight minutes I saw definite improvement in my pain. I was retested again about 10 minutes and within five minutes I was amazed. I now have hope and I am able to do activity I have not done in years. What I would tell someone asking if they should try this treatment ? I say go for it , you will know that day if and how much this will help you and that was really important to me. It was the best thing I have ever done in my life. Even if nothing has helped you in the past you have nothing to lose but the pain. This literally change my life.” - Marie S.

“In 1997 I was diagnosed with fibromyalgia. My life was very active before then. I was in the Marine Corps for five years and loading trucks at UPS for five years. And then I went to the post office and walked about 8 miles a day. And then I fell in a hole and I had to go through extensive rehab for that and then I found out how my body was reacting to pain. Not good. I

was not able to go back to work. I was finally diagnosed with fibromyalgia I wasn't sleeping well at night but in the long run I was getting worse and it seemed like my body was degenerating. Slowly, I wasn't as active anymore I put on weight the pain was becoming worse I was adding more medication. All this time I was worried about my health and what it was doing to me. And I saw myself in this downward spiral all the time. I'm reading as much as I can now 15 years after being diagnosed and ive seen progress in what doctors are seeing in and with fibromyalgia. Because there are new things out there. I saw a little ad online and I said well this is not going to help me anyway. I said I'll go ahead and call and okay I will go. I did not think it would do anything for me. Because I'm in pain all the time now. My husband was with me at the appointment .After the test I felt strange, it was odd, I felt more clarity, my eyes opened up my eyebrows were going up in the air and my body itself was feeling relaxed. It was a feeling I had not had for so long I forgot what it felt like. Then I got up and I did not have to help myself up like I usually did. My digestion is better I'm sleeping better and I'm eating better. I was so skeptical in the beginning. If you have fibromyalgia go for the test because once you're there you will not believe it. You will not believe that your body is feeling that great, its crazy. I just want to say thank you, thank you, thank you!" - Rita W.

"I have had fibromyalgia for about five years now. I started chiropractic care I have done x-rays, MRIs, prescriptions, physical therapy and nothing seemed to work. And since I have been in here I tried the solution and it's been about four weeks now and it worked I am basically pain-free now. And I have energy to exercise now because I couldn't because exercise hurts so much. Since I have more energy I can work more hours and I'm in a much better mood. All because of the solution." - Bridgette N
